DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-2 and 47 -48, drawn to an isolated hypersensitive responsive elicitor protein, classified in class 530, subclass 370, for example.
 - II. Claims 3-22 and 49-68, drawn to an isolated nucleic acid encoding a HR elicitor protein in an expression vector, host cells and plants transformed with said vector classified in class 800, subclass 278, for example.
 - III. Claims 23-34 and 69-80, drawn to a method for imparting stress or disease resistance in a plant or enhancing plant growth by external application of the plant with an isolated HR elicitor protein, classified in class 435, subclass 6.1, for example.
 - IV. Claims 81-92, drawn to a method for imparting stress or disease resistance or enhancing plant grow by transforming the plant with an isolated nucleic acid encoding a HR elicitor protein, classified in class 435, subclass 468, for example.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of

Art Unit: 1638

operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to divergent molecules having different functions and different effects.

3. Inventions III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions use divergent molecules and have different modes of operation.

4. Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product of Group I can be used in a materially different process such as immunoassays.

5. Inventions II and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product of Group II can be used in a materially different process such as hybridization process.

Art Unit: 1638

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and their recognized divergent subject matter, restriction for examination purposes as indicated is proper. In addition, the search required for one group is not required for another. Therefore, the coexamination of Inventions I-IV will pose a series search burden upon the Examiner.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
